DETAILED ACTION

Allowable Subject Matter

1. Claims 19-27 and 29-31 are allowed.
2. The following is an examiner's statement of reasons for allowance: Prior art shows: an hysteresis unit comprising a magnetic pole around an axis of rotation, alternating at a distance in a peripheral direction from a south pole situated in a magnet body having a magnet coil, a movable hysteresis ring having a slight play relative to the poles connected with the rotor, an peripheral surface of the north pole and south pole lie on the same circle and opposite to an adjacent peripheral surface of the hysteresis ring, wherein, the movable hysteresis ring surrounds the north pole and south pole, the poles being formed by pole fingers which, departing from axial front walls of the magnet body.

However, Prior art fails to show a hysteresis ring abutting a peripheral surface on the rotor wherein the pole fingers are interconnected by a non-magnetizable material and a magnet body thick walled, the pole fingers being integral in the two parts of the magnet body and being tapered to their free end in axial direction relative to their radial and tangential extension and being tapered to a point relative to their radial expansion. Prior art also fails to show a collar portion of the rotor abuts with an inner ring of the first bearing to form a first axial stop, and a guard ring mounted on the shaft abutting an inner ring of the second bearing while the outer rings of the first and second bearing abuts on axial stops each formed by their respective first and second parts of the magnet body. Prior art also fails to show, the magnet body radially divided by the magnetic coil and

both the first and second part being centered relative to each other and interconnected via a centering ring. Wherein, the collar portion of the rotor abuts with an inner ring of the first bearing to form a first axial stop, and a guard ring mounted on the shaft abutting an inner ring of the second bearing while the outer rings of the first and second bearing abuts on an axial stop each formed by the respective first and second parts of the magnet body.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
